

# A JOURNEY FROM THE CROSSROADS OF GREEN CHEMISTRY AND RADIOCHEMISTRY

KAMALIKA SEN\*

---

*Practice of green chemistry has become an inevitable requisite in every facet of chemical process. Starting from every-day chemistry to developing highly sophisticated chemical intricacy, green chemistry needs special attention from each and every other chemist. Developing radiochemical methods is not an exception to it. Till now radiochemistry has solved although limited but highly exquisite problems in human society. It still has an immense potential to serve the humanity in a better way. This article is an effort to bring up the applications of radiochemistry in advancing greener technology and also in the reverse way. Chemical facts are described where radiochemical methods meet at the crossroads of green chemistry and both advance together in a forward journey.*
