### Students Award on Basic Science Research

**Indian Science News Association (ISNA)** with donation received from Professor Mrinal Kanti Dewanjee, USA, is inviting nomination from students currently studying in XI and XII standard students for two awards one in Physical Science and other in Life Sciences. Each award contains a cash prize of Rs. 10,000.00 (Rupees ten thousand) and a certificate.

#### *Procedures*

- i. A write-up on a proposal (no more than 2000 words) on the importance of Basic Science Research including Translational Research and their impact on Society is to be submitted to the Honorary Secretaries, Indian Science News Association, 92, A.P.C. Road, Kolkata 700009.
- ii. Applicants must be residents of West Bengal.
- iii. At least 85 % average marks received in Science Subjects in Class X board examinations.
- iv. Application should be forwarded through the Head of the Institution.
- v. Last date of receiving application **25<sup>th</sup> April, 2022**.
- vi. The write up will be screened by an expert committee appointed by the competent authority.
- vii. Selected candidates are required to present the proposal stated in the write up before an expert committee as decided by the competent authority.
- viii. Awardees are required to give a seminar during award-giving ceremony.

#### *Brief Profile of Professor Mrinal K. Dewanjee*

Prof. Dewanjee completed his M.Sc. in Chemistry from Dacca University (Bangladesh) and Ph.D. in nuclear chemistry/physics from McGill University, Canada. In early 1970s, Dr. Dewanjee was the humble beneficiary of “Lab Bench-to-Bedside” Translational Research on developing the radioactive tracers for noninvasive imaging and measuring tools in cardiovascular diseases (Myocardial infarct [MI]-Heart attack) at Harvard Medical School, Boston, Coronary thrombosis, Mayo Clinic, Rochester, MN) and neurovascular disease (Stroke; Brain attack, University of Miami, FL) in animal models with clinically relevant endpoints. He made the algebraic equation for measuring platelet density on injured walls of artery and artificial surface of cardiovascular prostheses. After getting Federal Drug Administration’s (FDA), USA, approval with preclinical evaluations, they used the noninvasive nuclear imaging methods for imaging site of MI and arterial platelet-thrombi and evaluated the effect of several platelet-inhibitors in animal models and patients (Aspirin, Plavix, Prostacycline and recombinant Hirudin). At present Dr. Dewanjee is an Honorary Guest Scientist at Neurobiology, Neurodegeneration & Repair Laboratory, National Eye Institute, National Institutes of Health, USA. His present interest is on STEM Cell Research, one of the latest and advanced biomedical research to treat some of the deadly diseases, e.g. stroke, retinal blindness, Alzheimer’s and Parkinson’s disease.
