

# A GEOMETRIC INTERPRETATION OF THE COLLATZ CONJECTURE

BINAY KRISHNA MAITY

---

*This paper presents a novel geometric interpretation of the Collatz Conjecture. By analyzing the intersection points of specific linear equations, we demonstrate a relationship between these intersections and the iterative steps defined by the Collatz function. Furthermore, we explore the connection between the conjecture and polynomial expressions, offering a visual representation through a graphical analysis of polynomial coefficients and exponents.*
