

# CLIMATE CHANGE AND ITS IMPLICATIONS FOR HEALTHCARE SYSTEMS: A NARRATIVE REVIEW

UTSA PRAMANIK\*<sup>1</sup> AND AYAN BANERJEE<sup>1</sup>

---

*Climate change affects health and healthcare systems, particularly in developing countries where people already face many social and economic challenges. In addition to affecting infrastructure, supply chains, and services, it affects morbidity, mortality, and healthcare demand. This review synthesizes evidence linking climate change to healthcare system disruptions and adaptation responses. To guarantee efficient crisis management and ongoing service delivery, climate-resilient healthcare systems must be strengthened through enhanced infrastructure, staff readiness, surveillance, and integrated mitigation-adaptation strategies.*
