

RECENT ADVANCES IN SPICE PROCESSING TECHNOLOGY

J. S. PRUTHI*

Economically viable innovations are known to constitute the very backbone of success for any industry, may it be Agri-horticulture or Processing Technology, as long as the innovations are the offspring of systematic, well-planned and well-coordinated scientific and/or technological researches in the concerned area or discipline. This applies equally well to 'Spice Processing Technology'. The present presentation covers a resume of the available published literature on selected successful innovations in spice technology. Due to paucity of space and time, only the top ten spices out of 80 have been reviewed as per the available information during eighties and nineties.
