

THE SEARCH FOR EARTH-LIKE HABITABLE PLANET: ANTARCTICA LAKE VOSTOK MAY BE JUPITER'S EUROPA

A. B. BHATTACHARYA^{1*} AND B. RAHA²

This paper makes a comparison between the recently gathered information related to existence of life as derived from the Lake Vostok and Jupiter's satellite Europa. From the consideration of the Antarctic lake and the physical characteristics of Europa and its potential habitability, the possibility of microbial life in its ocean cannot be ruled out.
