

SPOTLIGHT ON SOCIAL DIMENSION OF ECOLOGY*

N. C. DATTA**

The paper aspires to explain and analyse the concept and concern of ecology, environmental science and environmental studies. A new angle of vision regarding the framework of environment (anatomy of environment) and value of biodiversity is highlighted. Biodiversity has been precisely defined. Noosystem concept, a novel philosophical doctrine, is projected. A calendar of events about environment is portrayed. New Ten Commandments for the survival of man and biosphere are also suggested.
