

FORENSIC ODONTOLOGY : THE NEW ASPECTS OF FORENSIC SCIENCE AND IMPORTANT ROLE OF DENTISTRY

SHYAMAL BAR AND SURAJIT BOSE

ABSTRACT : Forensic Odontology is a new branch of forensic science associated with maxillofacial pathology which deals with identification of a subject during traumatic tissue injury, postmortem or lack of finger print, bite mark analysis and resolving of legal matters. So dental surgeon has an important role in the collection and preservation of data and to assist the legal authority in the identification of victims and suspects.
