

MATHEMATICS IN VEDIC LITERATURE

ASOK KUMAR SINHA*

Measurements of different types were known to the people of Indus valley but the methods were found to differ from place to place. The Vedic people after being settled in a new land adopted certain crude methods for counting to satisfy their daily needs. Finding insufficiency in earlier methods they devised scientific numerical systems, one to nine, zero, Infinity and some other methods. Decimal system, decimal place value system and some other highly developed mathematical processes were commendable contributions of Vedic scholars which have now been accepted globally.
