

C.V. RAMAN, HIS STUDENTS AND CALCUTTA SCHOOL OF PHYSICS*

RAJINDER SINGH†

In general, when historians of science talk about the Calcutta School of Physics, their focus is on the lives and science of J.C. Bose, C.V. Raman, M.N. Saha and S.N. Bose. I am of the opinion that their students also come in the same list, because they played important role in developing science and technology in India. In the following communication, which is largely based on my books, I explore Raman's relation with S.K. Mitra - Discoverer of the D-ionospheric layer; B.B. Ray - A pioneer of x-ray spectroscopy; S.C. Sirkar - A specialist of intensity of Raman spectral lines; and K. Banerjee - Known for his work on magnetism, Raman- and x-ray spectroscopy.
