

NEURODEGENERATIVE DISEASES : AN UPDATE

SRIBIR SEN*

Neurological diseases are predominant among human population. Approximately 20% and even more percentage of people, over age of 60 years, are affected by major and minor neurological disorders, even though, most of these diseases are non-fatal. The major neurological diseases are Alzheimer's disease, Parkinson's disease etc. Key neuromodulators and their roles and therapy for these diseases have been highlighted.
